

How the right reagents reduce costs in molecular Point-of-Care

Key points to consider for an optimal cost structure without compromising on performance

Easier logistics

Ship & store under all conditions

With dried-down assays built on

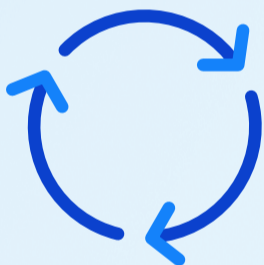

lyo-ready reagents

Lower cost

per assay shipment

per reaction

More efficient reagent use

No glycerol removal

can cut reagent loss by up to **20%**

Reduce need for overdosing

with high performing enzymes

Use fast cycling protocols
as fast as

5 min RT step

23 min PCR

Cut back sample prep

with **inhibitor tolerant**
enzymes

Reduce costs and speed up results with Roche CustomBiotech reagents
